# Statistics 300: Elementary Statistics 

Section 8-2

## Hypothesis Testing

- Principles
- Vocabulary
- Problems

## Principles

- Game
- I say something is true
- Then we get some data
- Then you decide whether
-Mr. Larsen is correct, or
-Mr. Larsen is a lying dog

## Risky Game

- Situation \#1
- This jar has exactly (no more and no less than) 100 black marbles
- You extract a red marble
- Correct conclusion:
- Mr. Larsen is a lying dog

## Principles

- My statement will lead to certain probability rules and results
- Probability I told the truth is "zero"
- No risk of false accusation

## Principles

- Game
- I say something is true
- Then we get some data
- Then you decide whether
-Mr. Larsen is correct, or
-Mr. Larsen has inadvertently made a very understandable error

| Principles |
| :--- |
| - Game |
| - I say something is true |
| - Then we get some data |
| - Then you decide whether |
| - Mr. Larsen is correct, or |
| - Mr. Larsen has inadvertently |
| made a very understandable error |

$\qquad$

## Principles

- My statement will lead to certain probability rules and results
- Some risk of false accusation
- What risk level do you accept?

## Risky Game

- Situation \#2
- This jar has exactly (no more and no less than) 999,999 black marbles and one red marble
- You extract a red marble
- Correct conclusion:
-Mr. Larsen is mistaken
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Risky Game

- Situation \#2 (continued)
- Mr. Larsen is mistaken because if he is right, the one red marble was a 1-in-a-million event.
- Almost certainly, more than red marbles are in the far than just one

## Risky Game

- Situation \#3
- This jar has 900,000 black marbles and 100,000 red marbles
- You extract a red marble
- Correct conclusion:
-Mr. Larsen's statement is reasonable

## Risky Game

- Situation \#3 (continued)
- Mr. Larsen's statement is reasonable because it makes $\mathbf{P}($ one red marble $)=\mathbf{1 0 \%}$.
- A ten percent chance is not too far fetched.

## Principles (reworded)

- The statement or "hypothesis" will lead to certain probability rules and results
- Some risk of false accusation
- What risk level do you accept?

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Risky Game

- Situation \#4
- This jar has 900,000 black marbles and 100,000 red marbles
- A random sample of four marbles has 3 red and 1 black
- If Mr. Larsen was correct, what is the probability of this event?

## Risky Game

- Situation \#4 (continued)
- Binomial: $\mathrm{n}=4, \mathrm{x}=1, \mathrm{p}=0.9$
- Mr. Larsen's statement is not reasonable because it makes $\mathbf{P}($ three red marbles $)=0.0036$.
- A less than one percent chance is too far fetched.

## Formal Testing Method

Structure and Vocabulary

- The risk you are willing to take of making a false accusation is called the Significance Level
- Called "alpha" or $\alpha$
- P[Type I error]

## Conventional $\alpha$ levels

| - Two-tail | One-tail |
| :--- | :---: |
| - 0.20 | $\mathbf{0 . 1 0}$ |
| - 0.10 | $\mathbf{0 . 0 5}$ |
| - $\mathbf{0 . 0 5}$ | $\mathbf{0 . 0 2 5}$ |
| - $\mathbf{0 . 0 2}$ | $\mathbf{0 . 0 1}$ |
| - $\mathbf{0 . 0 1}$ | $\mathbf{0 . 0 0 5}$ |

Formal Testing Method
Structure and Vocabulary

- Critical Value
-similar to $Z_{\alpha / 2}$ in confidence int. $\qquad$
-separates two decision regions
- Critical Region
- where you say I am incorrect
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Formal Testing Method

Structure and Vocabulary

- Critical Value and Critical Region are based on three things: $\qquad$
-the hypothesis
-the significance level
-the parameter being tested $\qquad$
- not based on data from a sample
- Watch how these work together

Test Statistic for $\mu$

$$
\frac{\bar{x}-\mu_{0}}{\left(\frac{s}{\sqrt{n}}\right)} \sim t_{(n-1) d f}
$$

## Test Statistic for $\mathbf{p}$

 ( $\mathrm{np}_{0}>5$ and $\mathrm{nq}_{0}>5$ )$\frac{\hat{p}-p_{0}}{\sqrt{\frac{p_{0} q_{0}}{n}}} \sim N(0,1)$

Test Statistic for $\sigma$

$$
\frac{(\mathrm{n}-1) \mathrm{s}^{2}}{\mathrm{~S}_{0}^{2}} \sim ?_{(\mathrm{n}-1) \mathrm{df}}^{2}
$$

## Formal Testing Method

Structure and Vocabulary

- $\mathbf{H}_{0}$ : always is $=\leq$ or $\geq$
- $\mathrm{H}_{1}$ : always is $\neq>$ or <

## Formal Testing Method

Structure and Vocabulary

- In the alternative hypotheses, $\mathrm{H}_{1}$ :, $\qquad$ put the parameter on the left and the inequality symbol will point to
$\qquad$ the "tail" or "tails"
- $\mathbf{H}_{1}: \mu, \mathbf{p}, \sigma \neq$ is "two-tailed"
- $\mathbf{H}_{1}: \mu, \mathbf{p}, \sigma<$ is "left-tailed"
- $\mathbf{H}_{1}: \mu, \mathbf{p}, \sigma>$ is "right-tailed"

Formal Testing Method
Structure and Vocabulary

- Example of Two-tailed Test
$-\mathbf{H}_{0}: \mu=\mathbf{1 0 0}$
$-\mathbf{H}_{1}: \mu \neq 100$

## Formal Testing Method

Structure and Vocabulary

- Example of Two-tailed Test
$-\mathbf{H}_{0}: \mu=100$
$-\mathbf{H}_{1}: \mu \neq 100$
- Significance level, $\alpha=0.05$
- Parameter of interest is $\mu$

Formal Testing Method
Structure and Vocabulary

- Example of Two-tailed Test
$-\mathrm{H}_{0}: \mu=100$
$-\mathbf{H}_{1}: \mu \neq 100$
- Significance level, $\alpha=0.10$
- Parameter of interest is $\mu$

Formal Testing Method
Structure and Vocabulary

- Example of Left-tailed Test
$-\mathrm{H}_{0}: \mathbf{p} \geq \mathbf{0 . 3 5}$
$-\mathrm{H}_{1}: \mathrm{p}<0.35$

## Formal Testing Method

Structure and Vocabulary

- Example of Left-tailed Test
$-\mathrm{H}_{0}: \mathbf{p} \geq \mathbf{0 . 3 5}$
$-\mathrm{H}_{1}: \mathrm{p}<0.35$
- Significance level, $\alpha=0.05$
- Parameter of interest is " p "

Formal Testing Method
Structure and Vocabulary

- Example of Left-tailed Test
$-\mathrm{H}_{0}: \mathrm{p} \geq 0.35$
$-\mathrm{H}_{1}: \mathrm{p}<0.35$
- Significance level, $\alpha=0.10$
- Parameter of interest is " p "

Formal Testing Method
Structure and Vocabulary

- Example of Right-tailed Test
$-\mathrm{H}_{0}: \sigma \leq 10$
$-\mathrm{H}_{1}: \sigma>10$

## Formal Testing Method

Structure and Vocabulary

- Example of Right-tailed Test
$-\mathrm{H}_{\mathbf{0}}$ : $\sigma \leq 10$
$-\mathrm{H}_{1}: \sigma>10$
- Significance level, $\alpha=0.05$
- Parameter of interest is $\sigma$

Formal Testing Method
Structure and Vocabulary

- Example of Right-tailed Test
$-\mathrm{H}_{0}: \sigma \leq 10$
$-\mathrm{H}_{1}: \sigma>10$
- Significance level, $\alpha=0.10$
- Parameter of interest is $\sigma$

## Claims

- is, is equal to, equals
- less than
- greater than
- not, no less than
- not, no more than
- at least
- at most
$\qquad$ $\leq$

## Claims

- is, is equal to, equals
- $\mathrm{H}_{0}$ : = $\qquad$
- $\mathrm{H}_{1}: \neq$

## Claims

- less than
- $\mathrm{H}_{\mathbf{0}}$ : $\geq$
- $\mathrm{H}_{1}$ : <

## Claims

- greater than
- $\mathrm{H}_{0}: \leq$
- $\mathrm{H}_{1}$ : >

## Claims

- not, no less than
- $\mathrm{H}_{0}$ : $\geq$
- $\mathrm{H}_{1}$ : <

## Claims

- not, no more than
- $\mathrm{H}_{0}: \leq$
- $\mathrm{H}_{1}$ : >

## Claims

- at least
- $\mathrm{H}_{0}$ : $\geq$
- $\mathrm{H}_{1}$ : <

## Claims

- at most
- $\mathbf{H}_{0}$ : $\leq$
- $\mathrm{H}_{1}$ : >

## Structure and Vocabulary

- Type I error: Deciding that $\mathbf{H}_{0}$ : is wrong when (in fact) it is correct
- Type II error: Deciding that $\mathbf{H}_{0}$ : is correct when (in fact) is is wrong

## Structure and Vocabulary

- Interpreting the test result
-The hypothesis is not reasonable
- The Hypothesis is reasonable
- Best to define reasonable and unreasonable before the experiment so all parties agree

## Traditional Approach to Hypothesis Testing

## Test Statistic

- Based on Data from a Sample and on the Null Hypothesis, $\mathrm{H}_{0}$ :
- For each parameter ( $\mu, \mathbf{p}, \sigma$ ), the
$\qquad$
$\qquad$
$\qquad$
$\qquad$ test statistic will be different
- Each test statistic follows a probability distribution

## Traditional Approach

- Identify parameter and claim $\qquad$
- Set up $\mathrm{H}_{0}$ : and $\mathrm{H}_{1}$ :
- Select significance Level, $\alpha$
- Identify test statistic \& distribution $\qquad$
- Determine critical value and region $\qquad$
- Calculate test statistic
- Decide: "Reject" or "Do not reject",

Next three slides are repeats of slides 19-21

Test Statistic for $\mu$ (small sample size: $\mathbf{n}$ )
$\frac{\bar{x}-\mu_{0}}{\left(\frac{s}{\sqrt{n}}\right)} \sim t_{(n-1) d f}$

Test Statistic for $p$ $\left(\mathrm{np}_{0}>5\right.$ and $\mathrm{nq}_{0}>5$ )
$\frac{\hat{p}-p_{0}}{\sqrt{\frac{p_{0} q_{0}}{n}}} \sim N(0,1)$

## Test Statistic for $\sigma$

$$
\frac{(\mathrm{n}-1) \mathrm{s}^{2}}{\mathrm{~s}_{0}^{2}} \sim ?_{(\mathrm{n}-1) \mathrm{df}}^{2}
$$
