

**Statistics 300:
Elementary Statistics
Section 6-4**

Sampling Distributions

- **Given: X has mean = m and standard deviation = s**
- **For a specified sample size “ n ”**
- **How many samples are possible?**
- **What is the distribution for means of all of these samples?**

Sampling Distributions

- **Consider 400,000 acres of grazing land for cattle**
- **Select 80 acres at random**
- **How many samples are possible?**
- **Measure the biomass for each**
- **What is the distribution of the st.dev. of all of these samples?**

The Uniform Distribution
 $X \sim U[a,b]$

The Uniform Distribution
 $X \sim U[100,500]$

The Uniform Distribution
 $X \sim U[100,500]$
P(2 values are both < 140)

If $X \sim U[a,b]$ then

$$P(c < x < d) = \frac{d - c}{b - a}$$

If $X \sim U[100,500]$ then

- $P(x_1 < 140 \text{ and } x_2 < 140) =$
- $P(x_1 < 140) P(x_1 < 140) =$
- $(0.1)(0.1) = 0.01$
